The conduit having a lower end of substantially circular cross-sectional shape with a diameter between 16-20 mm and an upper end having a progressively flattened and a substantially oval cross-sectional shape, the second upper section having a cross-sectional shape that is oval and tapers upward to a diameter of between 10-13 mm, the second section bifurcating upward into two branches one of which is longer than the other, extends along the warped axis, and is of substantially circular and uniform cross-sectional shape, the other branch being formed with a short laterally projecting
